The following is an examiner's statement of reasons for allowance: Uehara et al. (US 6513207, figures 1-9) is the closest art of record. While Uehara et al. teach the use of a male member having a stepped round face and an outer circular surface protruding from the stepped round face as shown in figure 6, the claim indicates that the stepped round face is at the front end with the clevis at the rear end so that the male and female members can be pulled apart to be released. This is not the case with the fastener of Uehara et al. because the orientation of the stepped round face is opposite that claimed and faces rearwardly so that the male and female members are not pulled so as to be released, but rather rotated relative to each other or pushed together to be released. The female member of Uehara et al. is also different from that claimed in that it fails to have a surface section that is of planar section at all so as to define an interior space with the elastic clips as claimed. This claimed structure of the female member cooperates with the claimed male member structure to provide a device structurally and functionally very different from the fastener of Uehara et al..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
